CHINOOK SALMON

1995	Strawberry Creek	A-CWT	48,343	Lake Michigan
1995	Root River	RP	99,000	Lake Michigan
1995	Pike River	RPLV	50,090	Lake Michigan
1996	Strawberry Creek	A-CWT	50,500	Lake Michigan
1996	Pike River	D	39,679	Lake Michigan
1997	Strawberry Creek	A-CWT	68,000	Lake Michigan

Many lake trout and chinook salmon have been adipose-clipped to indicate they carry a tiny coded wire tag (CWT) in their snout. A trained technician must find and decode these tags to determine stocking information. This information is important for the future management of Lake Michigan. Please take these fish to one of the collection stations located in each lakeshore community or call one of the DNR field stations listed below :

Peshtigo:	(715) 582-5000
Sturgeon Bay:	(920) 746-2860
Green Bay:	(920) 448-5151
Manitowoc:	(920) 683-4923
Plymouth:	(920) 892-8756

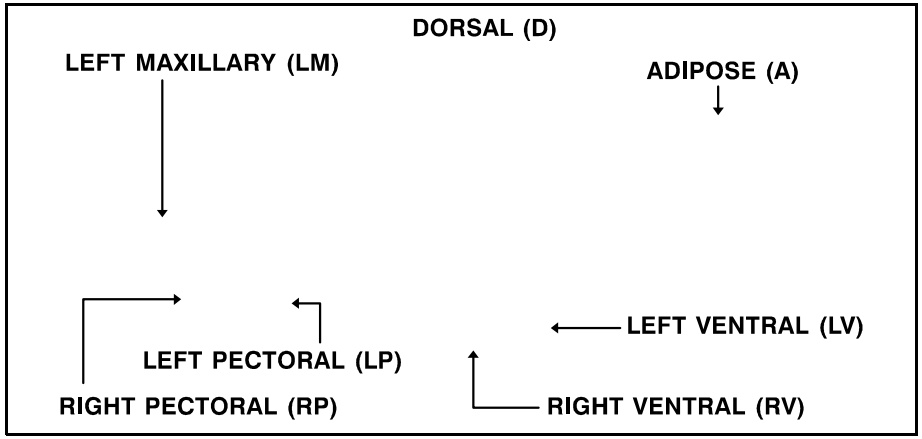
WISCONSIN LAKE MICHIGAN FIN CLIP SUMMARY 1987-1997
MARKED FISH ONLY



These fin clip patterns are for the Lake Michigan and Green Bay waters of the State of Wisconsin only. Trout and salmon with other fin clip patterns can originate from other states, and would be considered "strays" in Wisconsin waters. Fin regeneration makes some clips difficult to see. Note: These are not total numbers of trout and salmon stocked, only those that have been fin clipped.

* Tagged fish: Many fish are tagged with plastic floy tags. These include: PERCH, WALLEYE, LAKE TROUT, RAINBOW TROUT (STEELHEAD), NORTHERN PIKE, BROOK TROUT, AND BROWN TROUT. Your cooperation in returning these tags to the address below or the address listed on the tag, along with the length, weight (if known), date and location caught will be greatly appreciated. This information will help us make the Lake Michigan fishery even better.

* When releasing a tagged fish, please leave the tag in place.
