FRONT

# Impact of the Emerald Ash Borer

The Emerald Ash Borer is an invasive beetle threatening the population of Wisconsin's 717 million ash trees.

The Emerald Ash Borer damages a tree's ability to move food and water, leading to crown dieback and decline.

The loss of ash trees would be devastating to many communities and very expensive to remove and replace.

**Plant A Tree!**

For more information, call 414-273-TREE or visit greeningmilwaukee.org

Signs and Symptoms to look for:

S-shaped tunnels under the bark

D-shaped exit holes

Larvae under the bark
