Title: Loss of Natural Wetlands in Wisconsin

Problem: Spring trapping season has been very successful in reducing the beaver population in Wisconsin and has caused a dramatic reduction of wet lands due to over-harvesting of the beaver, and also catching non-target species in the spring beaver trapping season.

MARCH 1 start.

I would propose the spring harvest of beavers be temporarily discontinued until numbers of beaver increase.

Be It Resolved: that the Conservation Congress at its annual meeting held in Taylor County on April 16, 2007 recommends that the Conservation Congress work with the DNR to take action to temporarily discontinue spring trapping season on beaver.
