Resolution # 4

Title: Wolf Population in Wisconsin

The Problem:

The grey wolf has made a dramatic come back in Wisconsin.

Wolves have recently been taken off the endangered species list.

Wolves have killed and caused injury to many domestic animals in Wisconsin.

Wolves have increased the number of animal control agents on staff to take care of problem wolves.

Wolves are at a number now that are becoming a problem throughout Northern Wisconsin.

The wolf population is predicted to continue to increase if no control method is implemented and will probably cause more problems.

There is no public harvest system set up to have the sportsman help control the population of wolves.

Be it Resolved, that the Conservation Congress at its annual meeting held in Forest County on April 16, 2007 recommend that the Conservation Congress work with the Department to take action to correct this situation by structuring a public harvest system to be implemented in the future for the control of the wolf population in Wisconsin.
