Archery Turkey Hunting Opportunity

Whereas there seems to be more and more complaints about the population of turkeys.

Whereas more people complain about the damage turkeys cause, mainly crop damage, and also the fact that they can really disturb your hunts.

Whereas the turkey population in many areas has grown to the point where there could be a season to harvest hens during the spring harvest seasons.

Whereas archers have a very low success rate in harvesting turkeys so the impact on the population would be minimal.

Therefore be it resolved on April 13<sup>th</sup> 2009 in Price County that the DNR take steps to implement an archery permit for hens during the spring turkey seasons. This permit would be valid during all seasons.

Would you be in favor of the DNR creating an archery permit for only hens which would be valid during all the spring turkey seasons?

VOTES YES
