RESOLUTION

Problem

Whereas, Bayfield County is divided into both deep woods and agricultural lands and,

Whereas, the extreme northern portions above US Highway 2 has extreme winters and very few deer and,

Whereas, the current plan for managing our deer population is to set goals to increase, maintain or decrease by county and,

Whereas, this plan could result in overharvest of the extreme northern portion of the county, and

Whereas, the DNR had an option to manage by new DMU's separating agricultural and deep woods land that would avoid the problem

Solution

Bayfield County be divided into the DMU's defined by the department last fall
