Sparkling Lake

Sparkling Lake located in the Township of Arbor Vitae, Vilas County is infested with the invasive species, smelt, and has been for a long time. The UW Limnology Lab has done an unsuccessful study to remove the invasive. The continued presence of smelt provides a source from which this invasive could be spread. The Department of Natural Resources shall be required to remove alive as many of the existing game fish as they can, hold them at a secure facility, chemically treat the lake to kill all smelt, and then replace the game fish in the lake.
