The problem:

Over the years Wis. deer hunters have become more proficient, in harvesting animals because of the improvement in weapons, i.e. rifles, scoped muzzleloaders, crossbows, and improved archery equipment. Numbers for some areas show the buck harvest percentage is especially increasing. Maybe it is time Wisconsin does as some states like MN and Ohio, by allowing hunters to harvest only 1 buck per year. Once you shoot a buck, the rest of the seasons you would be allowed to shoot antlerless deer only.

Therefore be it resolved, at the Conservation Congress annual meeting April 11<sup>th</sup> 2016 in Waupaca Co. That the Dept of Natural Resources take action by allowing hunters to harvest only 1 buck per year.
