

SUBJECT: Request Authorization for Hearing Related to Revisions to Wis. Admin. Code ch. NR 345 pertaining to general permit standards to allow operation of a motor vehicle on the beds of outlying waters.

FOR: DECEMBER 2007 BOARD MEETING

TO BE PRESENTED BY: Martin Griffin

SUMMARY:

The department is proposing to revise Wisconsin Administrative Code ch. NR 345- Dredging in Navigable Waterways to create general permits for dredging to include authorization for the operation of a motor vehicle, on the beds of "outlying waters" (as defined in s. 29.001 (63), Stats.) to remove algae, mussels, dead fish and similar large public nuisance deposits; and for the removal and control of invasive plants on exposed lake bed.

The operation of motor vehicles and the removal or disturbance of materials on the beds of navigable waterways (also know as dredging) is regulated by Wis. Stats. Chapter 30 and Wisconsin Administrative Code Chapter NR 345. The statutes and current rule allows lakefront property owners to apply for an individual permit to use mechanized methods to remove nuisance deposits, or other invasive or unwanted vegetation. However, individual permits require a \$500 application fee and a 30 day public comment period before the permit can be issued.

Considering the changing lakeshore due to decreased water levels and the abundance of invasive species, the Department proposes to revise ch. NR 345 to create two new general permits. The general permits would allow lakefront property owners to operate motor vehicles on the beds of "outlying" navigable waters (as defined in s. 29.001 (63), Stats.) to remove public nuisance deposits (Cladophora, Zebra mussels, dead fish, etc.) and to control and manage invasive vegetation on exposed lakebed more efficiently while complying with general permit conditions created to protect the public interest in the lakebed. The general permit has a \$50 application fee and is processed in 30 days.

RECOMMENDATION: Request Authorization for Hearing

DATE: October 31, 2007

TO: Natural Resources Board

FROM: Matt Frank, Secretary

SUBJECT: Request Authorization of Hearings for Permanent Rule Revisions to NR 345, Wisconsin Administrative Code, pertaining to general permit standards to allow operation of a motor vehicle on the beds of outlying waters.

1. Why is this rule being proposed?

Under the direction of s. 30.20 sub. (1k), Wis. Stats; s. 30.20 sub. (1t) par. (b), Wis. Stats; and s. 30.206, Wis. Stats., the department is proposing revised rules that would create 2 new general permits for dredging. The two general permits include authorization for the operation of a motor vehicle, on the beds of "outlying waters" (as defined in s. 29.001 (63), Stats.) to remove algae, mussels, dead fish and similar large public nuisance deposits; and for the removal and control of invasive plants on exposed lake bed.

The proposed rule changes will establish general permits for activities that would otherwise require individual permits.

Background information and rationale for the rule

From 1965 to 1997, water levels in the Great Lakes were at or above their long-term average. However, from 1998-2000 water levels dropped significantly to around 3 feet below their long-term average. Water levels have continued to stay below their long-term averages, although no longer dropping as sharply as they did from 1998-2000. Presently water levels are below water levels of the year 2005 and 2006 and the National Oceanic and Atmospheric Administration (NOAA) long-range forecast for 2008 indicates more of the same. Specifically for the Great Lakes that border Wisconsin, Lake Michigan is 17 inches below its long-term average and Lake Superior is within 2 inches of its all time low.

Low water levels are not the only challenge facing the Great Lakes. Increased populations of invasive species such as Zebra mussels, Quagga mussels, Phragmites, and blooms of the nuisance algae Cladophora, have continued to plague the Great Lakes. Lower water levels contribute to a greater exposed beach area, and, as a result, mussel shells and large floating mats of algae often get deposited by wave action in large quantities along the lakeshore. The beached algal mats mixed with decaying zebra mussels and other invertebrates and fish result in unsightly, malodorous conditions. Piles of decaying Cladophora may affect tourism and recreation and owner property values, have been linked to taste and odor problems in drinking water, and may exacerbate levels of E. coli and other bacteria in beach sand and swimming waters, thus raising questions about beach safety. In Wisconsin, these nuisance conditions have been reported at many sites ranging from northeastern Green Bay and the tip of Door County to Kenosha. (UW Sea Grant 2005)

The biomass of Cladophora that washes ashore varies between years and locations. Mats of stranded algae two feet thick may collect in some areas— often embayments where waters are calmer and materials tend to collect (Whitman et al. 2003). In 2004, twenty five tons of Cladophora were removed from Milwaukee's lakeshore alone (Stauffer 2004). In other areas, accumulations are less where the decaying algae may remain offshore or confined to the swash zone (Harris 2004).

Lower water levels contributing to greater exposed beach area may also cause other challenges in addition to nuisance deposits. When water levels continue to stay low, the increased use of the exposed beach area and lakebed allows the disturbed area to become more susceptible to invasion by invasive plant species like Phragmites (Grime 2001). These invasive stands of Phragmites can become so dense that diverse wetland plant communities are eliminated. In addition, nonnative plants do not provide valuable food and shelter for fish and wildlife that native plants provide (Davis et al. 2000; Hulme and Bremer 2006).

Waterfront property owners desire to remove unwanted public nuisance deposits and invasive plants in an efficient manner. Currently, lakefront property owners are only allowed to remove public nuisance deposits by hand as existing statutes preclude them from using mechanized removal methods without a permit. Similarly, lakefront owners are only allowed to remove invasive plants (e.g., *Phragmites*) below the ordinary high water mark (OHWM) by hand cutting using non-vehicle means (e.g. weed whacker or non-riding lawn mower).

As the volume of public nuisance deposits and invasive plants vegetating exposed lakebed increases property owners can't realistically remove these unwanted deposits or invasive plants by hand. For nuisance deposits, the key to successful clean-up is vigilance in removing the algal mats as soon as they wash ashore. This is due to the fact that after only a few days in the warm sun, the algae begins to decay into an organic soup which makes it harder to remove. For emergent invasive plants growing on exposed lake bed (i.e. *Phragmites*, whose plant colonies spread mainly by underground root extensions), the key to successful management is to cut and chemically treat the cut stems in late July, August, and early September when the plant is pulling nutrients down to the roots.

The mechanical removal of large plant and animal accumulations has been accomplished with front-end loaders, backhoes or beach grooming equipment. However, monitoring of indicator bacteria in beach sand has shown that heavy equipment may grind decaying algae into moist sand creating conditions that promote higher bacterial growth (Harris 2004). The most efficient way to control *Phragmites* and other unwanted vegetation growing on the exposed lakebed is with the aid of motor vehicles such as beach groomers and all terrain vehicles. To allow limited use of motor vehicles for these purposes, precautions must be taken to avoid damaging sensitive beach vegetation and near shore habitat for fish and wildlife. There are currently no state guidelines for *Cladophora* removal or use of motor vehicles for invasive species management. By promulgating General Permits with standards for mechanized removal that include location standards (where on the shoreline can the activity take place), substrate restrictions (limits on the volume of sand vs. cobble that can be removed incidentally), area standards (how much material can be removed), types of mechanized methods allowed, and guidance on what to do with the removed material, among other things, we will be able to ensure that sensitive beach vegetation and near shore habitat impacts are avoided and that these activities are not inadvertently promoting bacterial growth.

The operation of motor vehicles and the removal or disturbance of materials on the beds of navigable waterways (also known as dredging) is regulated by Wis. Stats. Chapter 30 and Wisconsin Administrative Code Chapter NR 345. The statutes and current rule allows lakefront property owners to apply for an individual permit to use mechanized methods to remove nuisance deposits, or other invasive or unwanted vegetation. However, individual permits require a \$500 application fee and a 30 day public comment period before the permit can be issued.

Considering the changing lakeshore due to decreased water levels and the abundance of invasive species, the Department proposes to revise ch. NR 345 to create two new general permits. The general permits would permit lakefront property owners on the beds of "outlying" navigable waters (as defined in s. 29.001 (63), Stats.) to remove public nuisance deposits (*Cladophora*, Zebra mussels, dead fish, etc.) and invasive vegetation on exposed lakebed more efficiently while complying with general permit conditions created to protect the public interest in the lakebed. The general permit has a \$50 application fee and is processed in 30 days.

2. Summary of Rule Proposal

The operation of motor vehicles and the removal or disturbance of materials on the beds of navigable waterways (also known as dredging) is regulated by Wis. Stats. Chapter 30 and Wisconsin Administrative Code Chapter NR 345. The statutes and current rule require lakefront property owners to apply for an individual permit to use motor vehicles to remove nuisance deposits, or other invasive or unwanted vegetation below the OHWM. However, individual permits require a \$500 application fee and a 30 day public comment period before the permit can be issued.

With regards to invasive species management, currently the removal of vegetation on exposed lakebed areas (below the OHWM) is limited to a single 30 foot wide path measured along the shoreline per property¹. All vegetation (except for any state or federally listed endangered species) may be removed in this 30 foot wide path by hand without any Department approvals (e.g., hand pull it, use a string trimmer, push lawn mower, etc.). However, as the amount of exposed lake bed is increasing, the density of *Phragmites* and other invasive species is increasing and the use of hand held devices is becoming ineffective. Riparian land-owners have expressed the desire to employ the use of motorized vehicles (e.g. ATV, commercial riding mower, etc.) to control invasive species growing on exposed lakebed.

Considering the changing lakeshore due to decreased water levels and the abundance of invasive species, the Department proposes to revise ch. NR 345 to create two new general permits. The general permits would allow lakefront property owners to 1) remove large plant and animal nuisance deposits (*Cladophora*, mussel shells, dead fish, etc.) on the beds of outlying navigable waters (as defined in s. 29.001 (63), Stats.) more efficiently and 2) remove and control of invasive plants on exposed lake bed of outlying waters; while complying with general permit conditions created to protect the public interest in the lakebed. The general permit has a \$50 application fee and is processed in 30 days.

Currently, there are no specific state standards for *Cladophora* removal nor are there specific standards for the use of motorized vehicles to control invasive species. By promulgating a new general permit with standards for mechanized removal we will be able to ensure that sensitive beach vegetation and near shore habitat impacts are avoided. Some of the new general permit standards for the plant and animal nuisance deposit proposed includes:

- the removal will be limited to plant and animal nuisance deposits in the swash zone of the waterway,
- the total amount of material removed must be less than 3000 cubic yards,
- the General Permit issued is for the one time removal of the plant and animal nuisance deposit, and
- Equipment used must skim the nuisance deposit off the top of the lakebed and minimize any impact to the lakebed and surrounding vegetation.

Some of the new general permit standards for the management of invasive species growing on exposed lake bed include:

- Mowing or spreading herbicide in conformance with an invasive species control plan that includes a description of the existing condition including the types of plants present and their abundance; a strategy for the control of the invasive species; a plan for the re-establishment of the native plant community; and a monitoring plan to assess the success or failure of the control plan.

¹ Nonnative or invasive aquatic plants as designated under s. NR 109.07 may be removed by hand in an unlimited area

- The general permit issued is for the use of a motor vehicle for the explicit purpose of controlling emergent nonnative or invasive plant species and the vehicle must only be operated in the specific area that is detailed in the approved invasive species control plan or permit.
- The motor vehicle used must be low ground pressure equipment, such as a wide-tire vehicle or tracked equipment to minimize rutting and shall be used in a manner that minimizes the impacts to the native lakebed material and any surrounding native vegetation.

3. How does this proposal affect existing policy?

The proposed rule revision provides procedures and standards which are necessary to administer the regulation of dredging activities in navigable waters under chapter 30, Stats. The rule revision does not represent a change in policy but represents a change in permit process.

4. Has the Board dealt with these issues before?

Yes, emergency rules were put into effect June 10th, 2007 by order WT-26-07(E) authorizing a general permit for the operation of motor vehicles on the beds of outlying waters to remove large plant and animal nuisance deposits. This emergency rule was set to expire on Nov. 7th, but was recently extended by the Joint Committee for Review of Administrative Rules for an additional 60 days to ensure that the general permit will be available for the remainder of the open water season.

5. Who will be impacted by the proposed rules? How?

All types of waterfront property owners along the shores of outlying waters- from private landowners to business, builders and developers; will benefit from the additional general permits provided in these rules, and the clear procedures and standards. Aquatic plant managers, Municipalities, NRCS and other agencies or contractors who remove unwanted aquatic plants and dead animals from shoreline as well as participate in invasive species control and management will benefit from the streamlined general permits. The public who use and enjoy Wisconsin's navigable waters will also benefit from standards established to protect the public interest.

6. Information on environmental analysis, if needed.

The Bureau of Environmental Analysis and Review has determined that these rule revisions are a Type III action under s. NR 150, Wis. Adm. Code, and no environmental analysis is required. [150.03 (6) (b)]

7. Recommendation.

Department staff recommends authorization of hearing on the proposed rule revision to NR 345 as described in the attached Natural Resource Board Order WT-41-07

Assumptions Used in Arriving at Fiscal Estimate

Summary:

This rule package creates general permits for dredging (including the operation of a motor vehicle) on the beds of the Great Lakes to remove algae, mussels, dead fish and similar large plant and animal nuisance deposits that would otherwise be subject to individual permits under current law.

Assumptions:

Department staff that work in the areas that would be affected by the new general permit report that approximately 20 requests are made annually for permission to dredge on Great Lakes beds. Under current rules, approximately 2 of these requests actually result in an application for an individual permit at a cost of \$500 each, for an estimated total annual revenue of \$1,000 (2 permit applications x \$500).

Based on knowledge of beach conditions, Department staff estimate that the implementation of a general permit, as well as the streamlined permit process that goes with it, will double the number of requests for permission to dredge on Great Lakes beds from 20 to 40 annually, and that all 40 requests will result in actual permit applications.

Fiscal Estimate:

The Department estimates that under the proposed rule, approximately 2 dredging requests per year will continue to require a \$500 individual permit, for a total of \$1,000 in individual permit revenue. It is estimated that the remaining 38 requests will require general permits, for a total of \$1,900 in general permit revenue (38 general permits x \$50/each). Therefore, total revenue for individual and general permits is estimated to be \$2,900, which represents a \$1,900 increase over revenue generated under current rules.

The rule change will have no impact on local government costs.

ORDER OF THE STATE OF WISCONSIN NATURAL RESOURCES BOARD
AMENDING AND CREATING RULES

The Wisconsin Natural Resources Board proposes an order to amend NR 345.04(2)(a)3., (b), (c)(intro.) and 9. and (j)1.; and to create NR 345.03(10e), (10s) and (13m), 345.04(2)(a)2m.,(im) and (ir) relating to general permits for dredging in Great Lakes navigable waterways.

WT-41-07

Summary Prepared by the Department of Natural Resources

Statutory Authority: ss. 30.20(1), (1k), (1t) and (2), 30.206 and 227.11(2), Stats.

Statutes Interpreted: ss. 30.20(1), (1g), (1k), (1m), (1t) and (2) and 30.206, Stats.

Explanation of Agency Authority:

The Department has authority under s. 30.20, Stats., to promulgate rules that establish installation practices, construction and design requirements and limitations on the location of dredging conducted under statutory exemptions. The Department has authority under ss. 30.20 and 30.206, Stats., to promulgate rules to establish general permits.

Related statute or rule:

These rules relate directly to regulation of activities in navigable waters under ch. 30, Stats., waters designations in ch. NR 1, and the NR 300 series of rules.

Plain Language Analysis:

The purpose of this rule revision is to modify the existing rule to establish new general permits with appropriate conditions. This rule revision establishes standards for projects to be eligible for a general permit for dredging including operation of a motor vehicle, on the beds of the Great Lakes to remove algae, mussels, dead fish and similar large plant and animal nuisance deposits and to remove and control invasive aquatic plants. The proposed rule establishes general permits for activities that would otherwise require individual permits.

Federal Regulatory Analysis:

Any activity that results in a discharge (including deposits and structures) into “waters of the United States” is regulated by the U.S. Army Corps of Engineers (Corps) under section 404 of the Clean Water Act. An Individual Permit from the Corps is required, unless Wisconsin regulates the project in its entirety under ch. 30, Stats., in which case the project is authorized by the Corps under general permits GP-01-WI or GP-LOP-WI. Dredging or discharge into waters declared navigable under Section 10, Rivers and Harbors Act, 1899 is also regulated, and requires an Individual Permit from the Corps.

Comparison with Adjacent States:

Minnesota – Individual permit required (joint application with Corps). Exempts dredging in water courses with total drainage area of less than 5 square miles and not trout water. Prohibits dredging in number of cases including where dredging would not provide an effective solution to the problem. Similar information requirements and permit conditions to Wisconsin’s.

Michigan – Individual dredging permit required for all dredging from inland lakes and streams from MDEQ (Section 404 program has been assumed by state, so state permit serves as federal permit); individual permit dredging permit required from MDNR and Corps for dredging from Great Lakes waters and connecting waterways.

Iowa – Individual permit (joint application with Corps) required for all dredging projects in Iowa waters. Similar information requirements. Standard Corps permit conditions.

Illinois – Individual permit required to dredge from navigable waters. Disposal may require separate permit from Illinois EPA. Separate dredging permit required from Corps in navigable waters of the U.S.

Summary of Factual Data and Analytical Methodologies: Substantial published scientific literature on the effects on fish, wildlife and water quality during and after physical alterations to lake and streambeds is the basis for the rule parameters. In addition, data on actual field conditions during and after such alterations from department files is applied.

Analysis and Documents Supporting Determination of Small Business Effect: Any person placing a structure or making similar physical modifications to public navigable waters either qualifies for an exemption or must obtain a general or individual permit under state statute. To comply, small businesses follow the same requirements as other waterfront property owners: (1) make a self-determination of exemption using web-based tools provided by the department or describe their activity on an exemption determination request form; (2) complete a general permit application; or (3) complete an individual permit application. Schedules, application steps and compliance/reporting requirements are very basic for all applicants, and most projects can be planned and conducted by individuals with no specific professional background.

Anticipated Private Sector Costs: No significant fiscal effect on the private sector is anticipated.

Effect on Small Business: Dredging contractors, marinas and other waterfront businesses who wish to conduct dredging activities will be affected by the rule. Specific standards will provide clarity and consistency in the permitting process.

Place Where Comments Are To Be Submitted and Deadline For Submission: Written comments may be submitted at the public hearing, by regular mail, fax or e-mail to: Mr. Martin Griffin, Bureau of Watershed Management, PO Box 7921, Madison, WI, 53704. Written comments may also be submitted to the Department using the Wisconsin Administrative Rules Internet Website at <http://adminrules.wisconsin.gov>. The deadline for written comments is January 31, 2008

SECTION 1. NR 345.03 (10e), (10s) and (13m) are created to read:

NR 345.03 (10e) "Outlying waters" has the meaning in s. 29.001 (63), Stats., and means Lakes Superior and Michigan, Green Bay, Sturgeon Bay, Sawyer's Harbor, and the Fox River from its mouth up to the dam at DePere.

(10s) "Plant and animal nuisance deposit" means a recent and natural deposit within the swash zone of a waterway of Zebra and Quagga Mussels, dead fish, Cladophora or similar biological material caused by wave action in a quantity that is causing an annoyance, damage, or health issue to the public or waterway.

Note: "Plant and animal nuisance deposit" does not include the natural deposition of the native lakebed material like sand, cobble, silt, detritus, and other organic material.

(13m) "Swash zone" as defined by the United States Army Corps of Engineers Coastal Engineering Manual, means the zone of wave action on the beach, which moves as water levels vary, extending from the limit of run-down to the limit of run-up.

Note: The "swash zone" does not typically include areas that are stabilized with vegetation. The United States Army Corps of Engineers Coastal Engineering Manual can be found at: <http://www.usace.army.mil/publications/eng-manuals/em.htm>

SECTION 2. NR 345.04 (2)(a)2m. is created to read:

NR 345.04(2)(a)2m. If the department determines that the dredging proposal submitted under this section has the potential to impact an archaeological site or historic structure in accordance with 44.40, Stats., the application shall be deemed incomplete. The department may not consider the application complete or issue a general permit until the applicant submits documentation to demonstrate that the dredging project avoids impacts to the archaeological site or historic structure, or completes and documents requested investigations of archaeological sites or historic structures in accordance with 44.40, Stats. Reports of completed archaeological or historic structures investigations for projects are subject to departmental and Wisconsin Historical Society review and approval in advance of permit issuance.

SECTION 3. NR 345.04(2)(a)3. is amended to read:

NR 345.04(2)(a)3. If the applicant modifies their dredging project plans to meet the requirements of subd. 2. or 2m., the modified plans shall be submitted before the department can consider the application complete or issue a general permit.

SECTION 4. NR 345.04 (2) (b) is amended to read:

NR 345.04(2)(b) *Applicable activities.* Dredging that meets all of the standards in pars. (c) and either (d), (f), (h) ~~or (i)~~, (im) or (ir) is eligible for a general permit under ss. 30.20 (1t) (b) and 30.206, Stats. Dredging that meets all of the standards in pars. (c) and either (e) or (g) is eligible for a general permit under ss. 30.20 (1t) (a) and (am) and 30.206, Stats.

SECTION 5. NR 345.04(2)(c)(intro.), 7. and 9. are amended to read:

NR 345.04(2)(c) *General permit standards.* (intro.) In order to be eligible for a general permit, projects must meet all of the general permit standards in par. (c) in the addition to the specific activity standards in par. (d) ~~or (e)~~, (im) or (ir).

7. Erosion control measures shall meet or exceed the technical standards for erosion control approved by the department under subch. V of ch. NR 151. Any area where topsoil is exposed during construction shall be immediately seeded and mulched ~~or riprapped~~ to stabilize disturbed areas and prevent soils from being eroded and washed into the waterway.

Note: These standards can be found at the following website:
<http://dnr.wi.gov/org/water/wm/nps/stormwater/techstds.htm>

9. All equipment used for the project shall be de-contaminated following the most current protocols for invasive and exotic viruses and species prior to use and after use. All equipment that comes in contact with infested waters, including but not limited to tracked vehicles, barges, boats, silt or turbidity curtain, sheet pile and pumps shall be thoroughly disinfected. To the extent practicable, equipment and gear used on outlying waters should not be used in inland lakes and rivers.

Note: The most current decontamination protocols can be found at the following website: <http://dnr.wi.gov/> under the topic "VHS"

SECTION 6. NR 345.04(2)(im) is created to read:

NR 345.04(2)(im) *Standards for removal of plant and animal nuisance deposits.* The removal shall only be located in outlying waters.

1. This general permit is for the one time removal of the plant and animal nuisance deposit. Only 3 general permits for plant and animal nuisance deposit may be issued for each area of a waterbody on an annual basis.

2. The removal may not be located where there are public rights features as described in s. NR 1.06 or in waters in ecologically significant coastal wetlands along Lakes Michigan and Superior as identified in the Coastal Wetlands of Wisconsin (DNR-CMP project).

Note: The Coastal Wetlands of Wisconsin's Great Lakes can be found at the following website <http://dnr.wi.gov/org/land/er/nhi/projects/> under the topic "Coastal Wetlands".

3. The removal shall only be located within the swash zone of the waterway.

4. The removal is limited to the plant and animal nuisance deposit only. The removal of native lakebed material shall be limited to the extent practicable not to exceed a de minimus amount.

Note: The material may contain trash which should be removed along with the plant and animal nuisance deposit.

5. If rooted vegetation will be impacted, the project must conform with the vegetation removal standards of ch. NR 109.

6. The total amount of material removed shall be less than 3000 cubic yards.

7. This general permit does not authorize the redistribution of native bed material or the placement of additional sand/stone, etc.

8. Equipment used shall be designed to skim only the plant and animal nuisance deposit off of the native lakebed material. The equipment shall be used in a manner that minimizes the impacts to the native lakebed material and surrounding vegetation. The equipment shall remove the material along a path parallel to the shore within the swash zone.

9. If the removed material will be disposed of by landspreading, the material shall be incorporated into the soil by plowing or disking within 24 hours.

10. Unless using a developed boat launch, equipment used in the removal shall access the swash zone along one path perpendicular to the shore. The chosen route shall minimize the impact to the shoreline and vegetated lakebed.

SECTION 7. NR 345.04(2)(ir) is created to read:

NR 345.04(2)(ir) Standards for using motor vehicles for the management of non-native and invasive plant species growing on the exposed lakebed of outlying waters.

1. The project shall be located on the exposed lakebed of outlying waters.

2. The project shall be conducted when the exposed lakebed is dry.

3. The use of the motor vehicle is for the purpose of controlling emergent invasive or nonnative aquatic plant species as designated by the department under s. 23.24. Stats., and s. NR 109.07.

4. The use of the motor vehicle is for mowing or spreading herbicide in conformance with a written invasive or nonnative aquatic plant species control plan approved by the department or a permit issued under ch. NR 107 or 109.

Note: An invasive or nonnative aquatic plant species control plan, as required under s. NR 109.04 (3) and described in s. NR 109.09, must contain the following items: a description of the existing condition including the types of plants present and their abundance; a strategy for the control of the invasive or nonnative aquatic plant species; a plan for the re-establishment of the native plant community; and a monitoring plan to assess the success or failure of the control plan.

5. The motor vehicle may only be operated in the specific area that is detailed in the approved invasive species control plan or permit. This permit does not authorize the operation of any motor vehicle in areas outside of those designated in the approved plan or permit.

6. The motor vehicle used shall be low ground pressure equipment, such as a wide-tire vehicle or tracked equipment to minimize rutting. Equipment operation shall cease when rutting occurs. Any rutting of the lakebed shall be immediately restored by the operator of the vehicle.

7. The motor vehicle shall be used in a manner that minimizes the impacts to the native lakebed material and any surrounding native vegetation.

SECTION 8. NR 345.04(2)(j)1. is amended to read:

NR 345.04(2)(j) *Individual permit or contract required.* 1. Activities which do not meet the standards in par. (c) and either (d), (e), (f), (g), (h), (i), (im), (ir) or (j) shall require an individual permit or contract.

SECTION 9. EFFECTIVE DATE. This rule shall take effect on the first day of the month following publication in the Wisconsin administrative register as provided in s. 227.22(2)(intro.), Stats..

SECTION 10. BOARD ADOPTION. This rule was approved and adopted by the State of Wisconsin Natural Resources Board on _____.

Dated at Madison, Wisconsin _____.

STATE OF WISCONSIN
