Species	Rationale for Delisting	Photo
Bog Bluegrass ( <i>Poa paludigena</i> )	Population in WI appears stable. New records have resulted from inventories.	
Canada Horse-balm ( <i>Collinsonia canadensis</i> )	Extirpated. Only two native occurrences known in the state. One is presumed extirpated and the other has not been observed for 150 years. Species is conspicuous and easy to identify.	
Drooping Sedge ( <i>Carex prasina</i> )	Population in WI stable. Narrow habitat preference, however fairly wide distribution and found regularly in suitable habitat.	
Prairie Indian-Plantain ( <i>Cacalia tuberosa</i> )	Population in WI stable to increasing. Has responded well to prairie management.	

## Species Removed from the WI Endangered and Threatened List January 1, 2014

Species	Rationale for Delisting	Photo
Snowy Campion ( <i>Silene nivea</i> )	Population in WI appears stable. Able to persist with reed canary grass and in degraded streamside habitats. Species no longer imperiled.	 A close-up photograph showing a person's hand holding a single stem of a Snowy Campion plant. The stem is green and has several narrow, lance-shaped leaves. The background is a field of tall green grass.
Yellow Gentian ( <i>Gentiana alba</i> )	Population in WI increasing. Most of the population expansion and increases have occurred in old fields.	 A photograph of a yellow Gentian flower in bloom. The flower is bright yellow with multiple petals and is surrounded by green leaves. The background is slightly blurred, showing more of the plant and some brown stems.
Yellow Giant Hyssop ( <i>Agastache nepetoides</i> )	Population in WI stable to increasing. Has responded well to savanna management and restoration.	 A photograph of a yellow Giant Hyssop flower spike. The spike is tall and slender, covered in small, densely packed yellow flowers. The background is a field of green plants with some purple flowers.
