Objectives for this Management Area are to manage for current levels of red oak, assuring natural regeneration through harvest and site disturbance and increasing the average age of this type in mixed stands. Northern Hardwoods will be decreased as these stands are managed for red oak and natural pine regeneration.

Stand 3 is a northern hardwood stand. The northern hardwood will be selectively thinned to a basal area of 84 sq ft/acre (70% retention). Northern red oak will be favored in the stand.

Harvest activity is limited to late summer through mid-winter due to SGCN.

Biomass harvest is approved as soils are appropriate.

Access to site by woods roads and Escanaba ski trail. Will work with NHAL Trails Coordinator.
