

# Epizootic Hemorrhagic Disease (EHD) surveillance in Wisconsin white-tailed deer August, September & October 2012

## Legend

= County with confirmed EHD case

**1** = # of deer confirmed positive for EHD Wildlife Health has received positive EHD test results

**1** = # of deer suspect for EHD\* sick/dead deer reports are consistent with EHD but no samples were available for testing

\*After a county receives a positive EHD result no additional tissues will be collected from that county but suspects will continue to be tallied

*Reports of dead deer not consistent with EHD as the cause of death are not included on map.*
